

## Escape ladder used fire or burglary

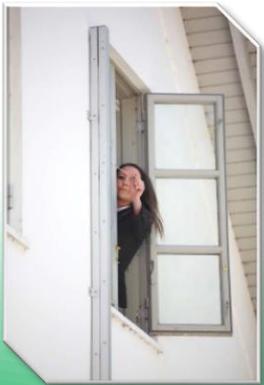

The Modum Escape ladder provides an elegant solution for self-rescue in case of emergency. The Modum Escape ladder can be used to leave the building in case of fire. The Modum Escape ladder can as well serve as a “secret” emergency which is not visible from the outside, in case of burglary / intrusion.

The compact dimensions of the ladder in its closed condition prevent it from being perceived as a ladder and rather considered to be a rain pipe. Dimensions closed: 72 mm x 47 mm. Dimensions opened: 398 mm x 47 mm.

Moreover, the Modum Escape ladder can be adapted to the facade (multi-colored, if necessary).

Modum Escape ladder for various types of buildings

1. Pull out the Release Pin

2. Open the Escape ladder

3. Climp down

4. Climp down with multiple persons

Made in Germany

# Modum Escape ladder

- Handling is easy and quick – within a few seconds.
- The Modum Escape ladder is made of anodized aluminum and is therefore completely weatherproof and extremely durable. The connecting elements are stainless steel.
- The Modum Escape ladder has a vertical load capacity of approximately 5 kN ~ 500 kg per meter.
- The steps have an anti-slipping profile.
- Because the Modum Escape ladder remains closed when not in use, the steps are always free of ice.

- Multiple floors can be served by one ladder.
- Descent is possible at any time from any floor, but unintentional ascent is not possible.
- It is impossible to open the Modum Escape ladder from the ground.
- The Modum Escape ladder is made individually for the client. A wide range of models and options is available for various applications
- A fall protection harness is optionally available for the Modum Escape ladder.
